

RAMADHAN

Software Developer · AI-Augmented Builder · Educator

Cilegon, Banten, Indonesia | ramadhan25321@gmail.com | +62 895-0170-0818 | github.com/314dhan | linkedin.com/in/ramadhan-50973b1aa | ramadhanprofile.vercel.app

PROFESSIONAL SUMMARY

Computer Science graduate (GPA 3.71) with hands-on experience building full-stack web applications, mobile apps, and AI-augmented developer tools. Actively applies large language models and agentic AI workflows — including Claude, prompt engineering, and multi-agent orchestration — to accelerate software delivery and reduce manual effort. Combines solid programming fundamentals (Flutter, Python, Java, JavaScript, Laravel) with a track record of shipping production-grade personal projects. Equally comfortable teaching technology concepts to beginners or architecting backend systems from scratch.

AI & AGENTIC CAPABILITIES

What sets me apart in the agentic era:

- Builds and maintains AI-augmented personal projects using Claude (Anthropic) as a coding collaborator — writing, debugging, and iterating features through structured prompt engineering
- Designs multi-step agentic workflows: task decomposition, context management, tool use, and output validation across software projects
- Uses AI tooling to compress solo development cycles — shipping features that would traditionally require a team (mobile + web + backend in parallel)
- Familiar with LLM integration patterns: system prompts, chain-of-thought, RAG-adjacent retrieval, and structured JSON output parsing
- Applies AI-assisted debugging, code review, and refactoring as a daily workflow rather than an occasional shortcut

EXPERIENCE

PT Koding Next · *Advance Teacher (Programming Instructor)* Aug 2024 – Jul 2025

- Taught Python, JavaScript, PHP, Lua (Roblox), HTML/CSS, and MySQL to students across multiple cohorts
- Delivered full-stack web curriculum: frontend (HTML/CSS/JS), backend (Node.js + MongoDB), and databases (MySQL)
- Integrated AI tools into lesson preparation — using LLMs to generate exercises, debug student code live, and explain concepts at multiple difficulty levels
- Consistently met monthly KPIs; maintained hardware and classroom tech environment for uninterrupted learning

Binance P2P · *Verified Crypto Merchant (Self-Employed)* Jan 2025 – Present

- Operate as a Verified Merchant on Binance P2P, facilitating IDR ↔ USDT trades for retail clients — processing approximately \$200,000/month in transaction volume
- Manage buy/sell listings with competitive spread pricing, identity-verified KYC compliance, and transaction limits up to IDR 100,000,000 per order
- Built and deployed a Python automation bot to monitor competitor ad pricing and auto-adjust own listings in real time — reducing manual overhead and improving price competitiveness

Primkobis · *Operator Assistant* Feb 2019 – Nov 2023

- Inspected hot metal transport equipment and coordinated safe placement of molten steel reservoirs in field operations
- Produced daily tonnage reports — introduced structured data logging that improved reporting accuracy
- Secured operational work areas and supported field operators in a high-risk industrial environment

PT Indorama Petrochemical · *School Intern* Apr 2017

- Measured and logged waste sample parameters (viscosity, pH, DSS) and monitored demineral water pipe pressure

PERSONAL PROJECTS (SELF-DIRECTED)

Japanese Language Learning App · Flutter (Mobile) + Web

- ▶ Built a cross-platform Japanese learning app (Hiragana, Katakana, Kanji, JLPT quiz modes) — mobile in Flutter/Dart, companion web version in HTML/CSS/JS
- ▶ Implemented Duolingo-style streak system with scheduled push notifications and last-chance reminders using Flutter local notifications
- ▶ Developed romaji answer-checking engine with custom normalization logic to handle semicolon-separated data formats and dot-within-entry edge cases
- ▶ Entire project conceived, architected, and shipped solo — using AI collaboration to accelerate feature delivery across platforms simultaneously

PassSafe · Android Password Manager (Java / Material Design 3)

- ▶ Engineered a local Android password vault with AES/Fernet encryption, PBKDF2-HMAC-SHA256 key derivation, and biometric/PIN authentication gate
- ▶ Built Backup/Restore system via Android Storage Access Framework; implemented atomic master-password rotation that re-encrypts all vault entries
- ▶ Resolved complex UI bugs including RecyclerView adapter staleness and an infinite-redirect unlock flow using Intent extras pattern

P2P Trading Bot · Python / Binance API

- ▶ Built an automated Binance P2P price-monitoring bot that watches competitor ads and auto-adjusts own listing prices in real time
- ▶ Handled geo-blocking constraints by engineering for VPS deployment (Singapore region); demonstrates understanding of network, API rate limits, and deployment environments

News Management System · PHP / Laravel / MySQL

- ▶ Developed a full-featured news CMS with article creation, category management, and role-based access control for editors and admins
- ▶ Implemented CRUD operations, image upload handling, slug-based routing, and paginated public-facing article feed

Campus Voting System · PHP / Laravel / MySQL

- ▶ Built a secure digital voting platform for campus elections with authenticated voter sessions and tamper-resistant one-vote-per-user enforcement
- ▶ Implemented real-time vote tallying, admin dashboard with live result visualization, and voter eligibility validation

Link Shortener · Node.js / JSON / Vercel

- ▶ Built a URL shortening service with per-link analytics (click tracking, referrer data) deployed on Vercel — live at linkshortener-chi.vercel.app
- ▶ Used JSON as a lightweight database, demonstrating ability to ship production tools without heavyweight infrastructure

SSW Restoran & SSW Food Factory · JavaScript / HTML / CSS

- ▶ Developed two Japanese Specified Skilled Worker (SSW) study tools: a restaurant vocabulary flashcard app and a food factory certification prep site
- ▶ Reflects genuine Japanese language interest (JFT-Basic certified); both tools are publicly deployed and used for SSW exam preparation

EDUCATION

Serang Raya University · Bachelor of Computer Science · GPA 3.71 / 4.00

2021 – 2025

SKILLS

Languages	Python, JavaScript, PHP, Java, Dart, Lua, HTML/CSS, SQL
Frameworks	Flutter, Laravel, Node.js, Express, Chart.js
AI & LLMs	Claude (Anthropic), prompt engineering, agentic workflow design, LLM-assisted development, structured output parsing
Databases	MySQL, MongoDB, SQLite

Mobile	Android (Java), Flutter (Dart) — cross-platform mobile & desktop
Tools	Git/GitHub, VS Code, Android Studio, Google Workspace, Microsoft Office
Soft Skills	Teaching & curriculum design, technical communication, self-directed learning, project management

CERTIFICATIONS

- Junior Web Developer — BNSP (National Professional Certification Body)
- Java: Basic to Expert — Udemy
- PHP: Basic to Expert — Udemy
- Python: Basic to Expert — Udemy
- Excel: Basic to Expert — Udemy
- JFT-Basic (Japanese Language Proficiency — Japan Foundation)

Portfolio: ramadhanprofile.vercel.app · Open to relocation & remote roles
